Reflections on Inequality and Capital in the 21st century

Thomas Piketty

EHESS and Paris School of Economics

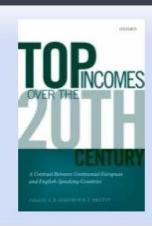

UCL, December 14 2015

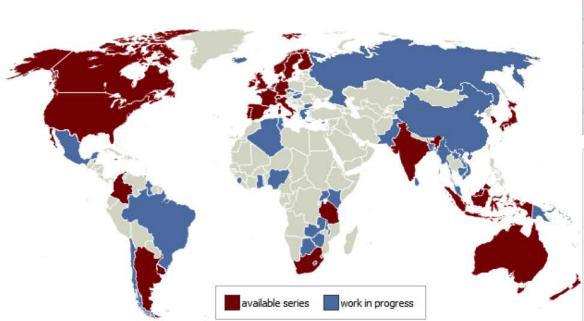

- This presentation is partly based upon my book
 Capital in the 21st century (HUP, 2014)
- In this book, I study the global dynamics of income and wealth distribution since 18° in 20+ countries. I use historical data collected over the past 15 years with Atkinson, Saez, Postel-Vinay, Rosenthal, Alvaredo, Zucman, and 30+ others. Aim is to put distribution back at the center of political economy.

 I attempt to develop a multidimensional approach to capital ownership and property relations, and to study beliefs systems about inequality
- Today I will present a number of selected historical evolutions & attempt to draw lessons for the future
- All series available at http://piketty.pse.ens.fr/capital21c

This presentation: three points

• 1. The long-run dynamics of income inequality.

The end of the Kuznets curve, the end of universal laws.

Institutions and policies matter: education, labor, tax, etc.

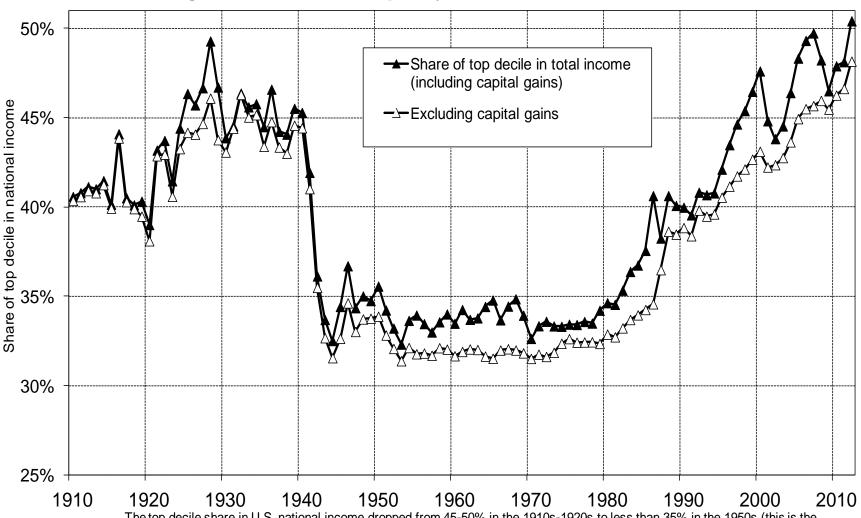

• 2. The return of a patrimonial (or wealth-based) society. Wealth-income ratios seem to be returning to very high levels in rich countries. The metamorphosis of capital.

• 3. The future of wealth concentration. With high r - g during 21^c (r = net-of-tax rate of return, g = growth rate), then wealth inequality might rise again. Need for more democratic transparency and regulation.

- 1. The long-run dynamics of income inequality.
 The end of the Kuznets curve, the end of universal laws.
 Institutions and policies matter: education, labor, tax, etc.
- During 20c, major shocks wars, depressions, revolutions

 played a major role in the reduction of inequality, and
 in order to force elites to accept the new social and fiscal
 institutions which they refused before these shocks.
- Political determinants of inequality are more important than pure economic determinants

Figure I.1. Income inequality in the United States, 1910-2012

The top decile share in U.S. national income dropped from 45-50% in the 1910s-1920s to less than 35% in the 1950s (this is the fall documented by Kuznets); it then rose from less than 35% in the 1970s to 45-50% in the 2000s-2010s.

Sources and series: see

Figure 1. Income inequality: Europe and the U.S., 1900-2010 50% Share of top income decile in total pretax income (decennial averages) —

Top 10% Income Share: Europe, U.S. and Japan, 1900-2010

The top decile income share was higher in Europe than in the U.S. in 1900-1910; it is a lot higher in the U.S. in 2000-2010. Sources and series: see piketty.pse.ens.fr/capital21c.

 The rise in US inequality in recent decades is mostly due to rising inequality of labor income

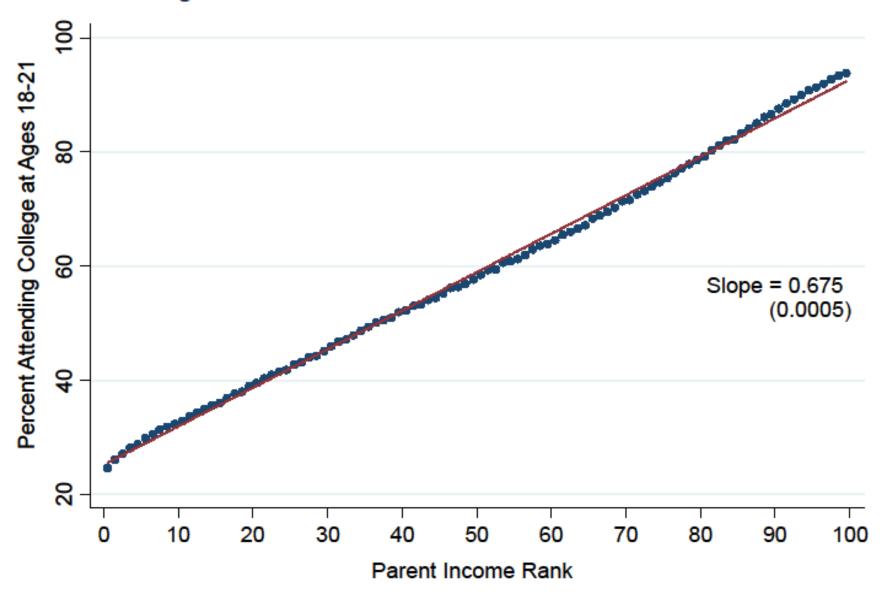

- It is due to a mixture of reasons: changing supply and demand for skills; race between education and technology; globalization; more unequal to access to skills in the US (rising tuitions, insufficient public investment); unprecedented rise of top managerial compensation in the US (changing incentives, cuts in top income tax rates); falling minimum wage in the US
 - → institutions and policies matter

\$12.0 10€ 9€ \$10.8 8€ \$9.6 7€ \$8.4 Hourly minimum wage 6€ \$7.2 5€ \$6.0 4€ \$4.8 3€ \$3.6 France (2013 euros, left hand scale) 2€ \$2.4 United States (2013 dollars, right hand scale) 1€ \$1.2 0€ \$0.0 1950 1955 1960 1965 1970 1975 1980 1985 1990 1995 2000 2005 2010 Expressed in 2013 purchasing power, the hourly minimum wage rose from \$3.8 to \$7.3 between 1950 and

Figure 9.1. Minimum wage in France and the U.S., 1950-2013

2013 in the U.S., and from €2.1 to €9.4 in France. Sources and series: see piketty.pse.ens.fr/capital21c.

College Attendance Rates vs. Parent Income Rank in the U.S.

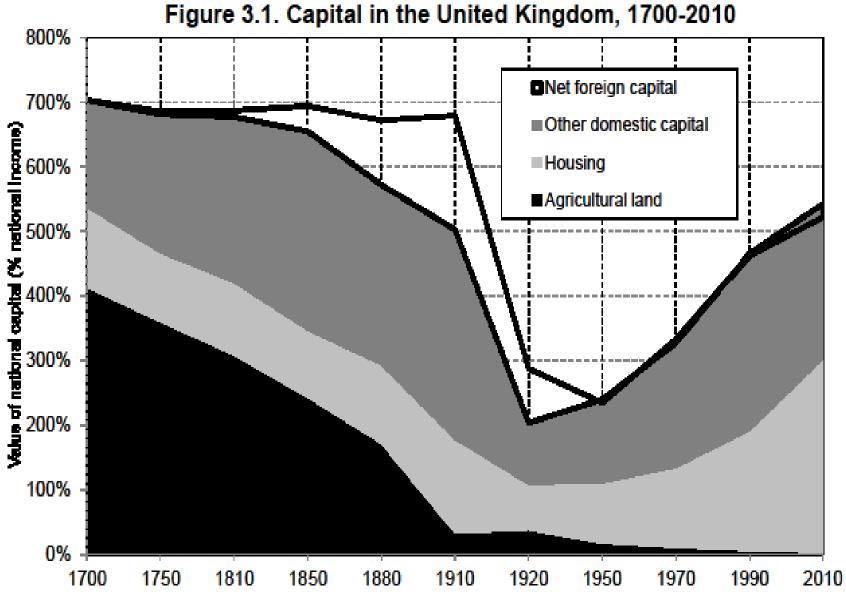

• 2. The return of a patrimonial (or wealth-based) society. Wealth-income ratios seem to be returning to very high levels in rich countries. Intuition: in a slow-growth society, wealth accumulated in the past can naturally become very important. In the very long run, this can be relevant for the entire world. Not bad in itself, but new challenges. The metamorphosis of capital call for new regulations of property relations. The key role of the legal and political system. Democratizing capital: worker codetermination, patent laws, etc.

800% 700% Germany Market value of private capital (% national income) France 600% -United Kingdom 500% 400% 300% 200% 100% 1870 1890 1910 1930 1950 1970 1990 2010

Figure I.2. The capital/income ratio in Europe, 1870-2010

Aggregate private wealth was worth about 6-7 years of national income in Europe in 1910, between 2 and 3 years in 1950, and between 4 and 6 years in 2010. Sources and series: see piketty.pse.ens.fr/capital21c.

National capital is worth about 7 years of national income in the United Kingdom in 1700 (including 4 in agricultural land). Sources and series: see piketty.pse.ens.fr/capital21c.

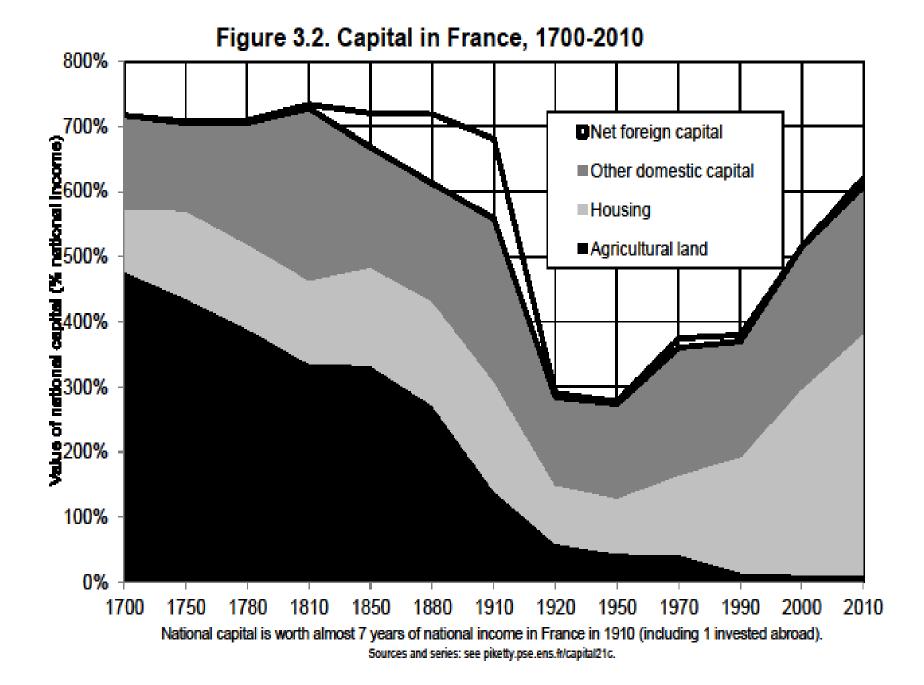

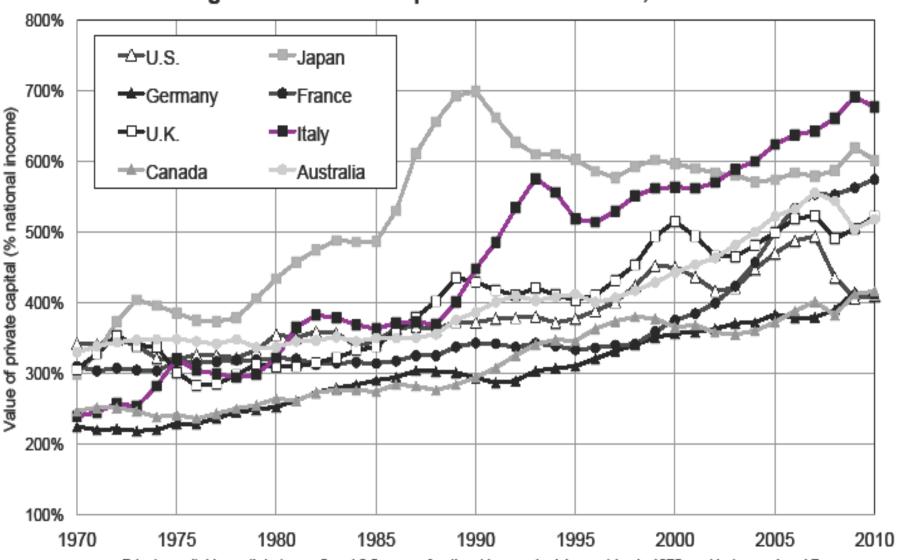

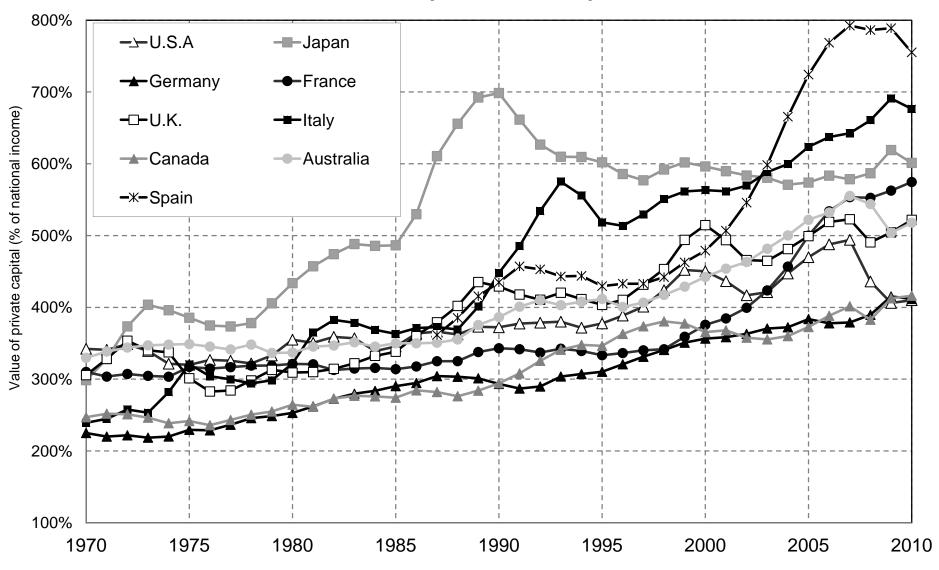

Figure 5.3. Private capital in rich countries, 1970-2010

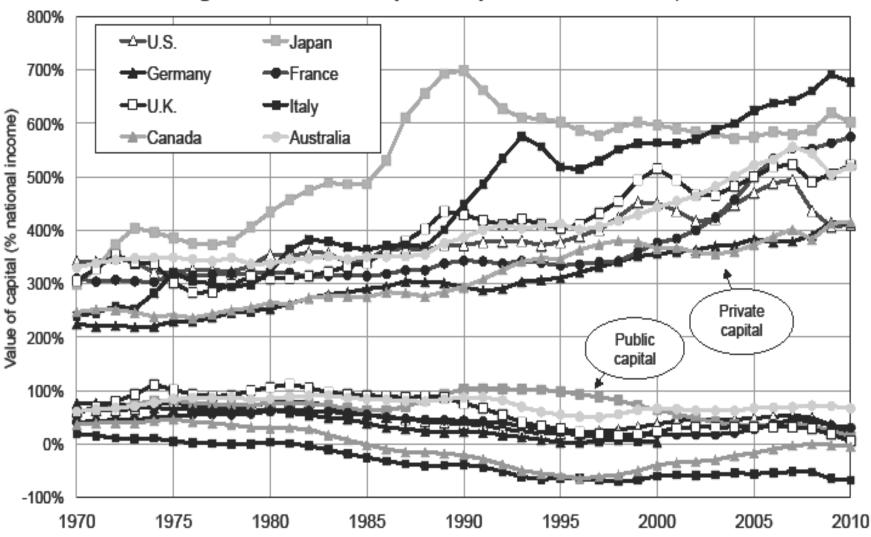

Private capital is worth between 2 and 3.5 years of national income in rich countries in 1970, and between 4 and 7 years of national income in 2010. Sources and series: see piketty.pse.ens.fr/capital21c.

Figure S5.2. Private capital in rich countries: from the Japanese to the Spanish bubble

Private capital almost reached 8 years of national income in Spain at the end of the 2000s (ie. one more year than Japan in 1990). Sources and series: see piketty.pse.ens.fr/capital21c.

Figure 5.5. Private and public capital in rich countries, 1970-2010

In Italy, private capital rose from 240% to 680% of national income between 1970 and 2010, while public capital dropped from 20% to -70%. Sources and series: see piketty.pse.ens.fr/capital21c.

• 3. The future of wealth concentration. With high r - g during 21^c (r = net-of-tax rate of return, g = growth rate), then wealth inequality might reach or surpass 19^c oligarchic levels. Need for more transparency about wealth. Need for progressive taxation of net wealth.

Table 12.1. The growth rate of top global wealth, 1987-2013	
Average real growth rate per year (after deduction of inflation)	1987-2013
The top 1/(100 million) highest wealth holders (about 30 adults out of 3 billions in 1980s, and 45 adults out of 4,5 billions in 2010s)	6,8%
The top 1/(20 million) highest wealth holders (about 150 adults out of 3 billions in 1980s, and 225 adults out of 4,5 billions in 2010s)	6,4%
Average world wealth per adult	2,1%
Average world income per adult	1,4%
World adult population	1,9%
World GDP	3,3%

Between 1987 and 2013, the highest global wealth fractiles have grown at 6%-7% per year, vs. 2,1% for average world wealth and 1,4% for average world income. All growth rates are net of inflation (2,3% per year between 1987 and 2013). Sources: see piketty.pse.ens.fn/capital21c.

Billionaire wealth as a fraction of GDP (according to Forbes, 2014)

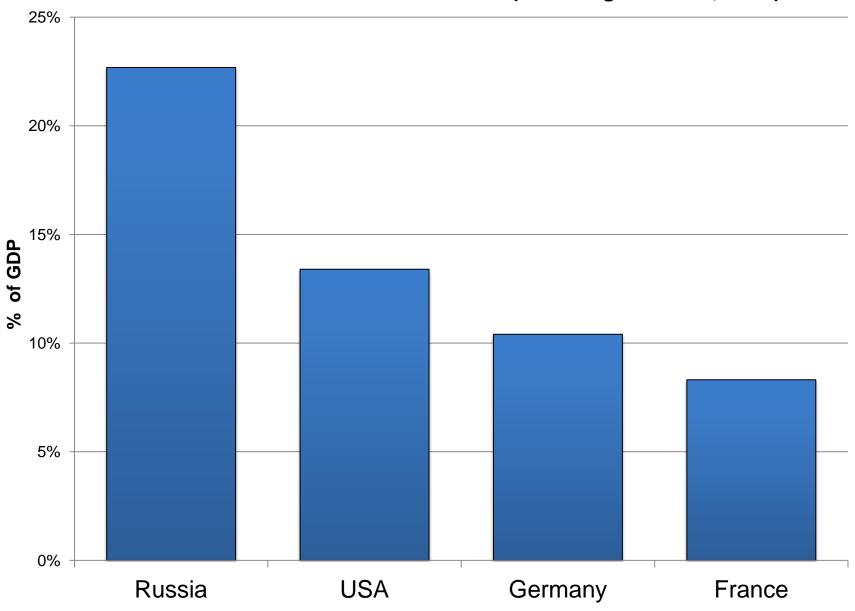

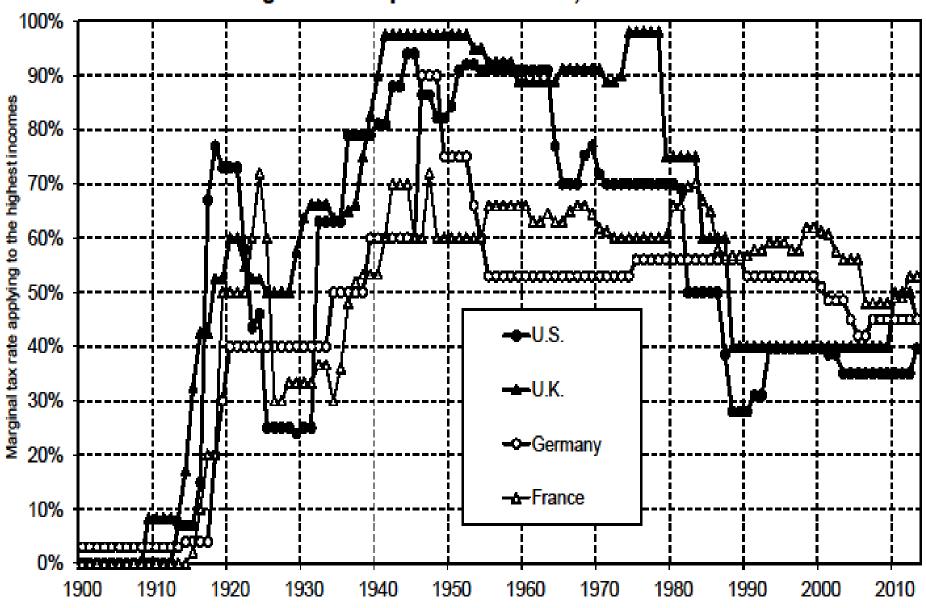

Table 12.2. The return on the capital endowments of U.S. universities, 1980-2010

Average real annual rate of return (after deduction of inflation and all administrative costs and financial fees)	Période 1980-2010
All universities (850)	8.2%
incl.: Harvard-Yale-Princeton	10.2%
incl.: Endowments higher than 1 billion \$ (60)	8.8%
incl. Endowments between 500 millions and 1 billion \$ (66)	7.8%
incl. Endowments between 100 and 500 million \$ (226)	7.1%
dont: Endowments less than 100 million \$ (498)	6.2%

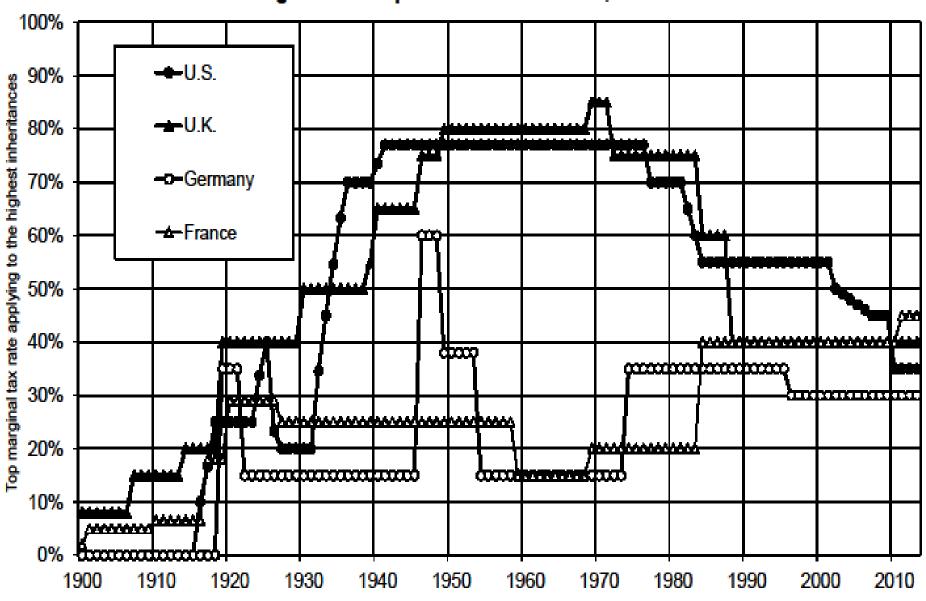

Between 1980 and 2010, U.S. universities earned an average real return of 8.2% on their capital endowments, and all the more so for higher endowments. All returns reported here are net of inflation (2.4% per year between 1980 and 2010) and of all administrative costs and financial fees. Sources: see piketty.pse.ens.fr/capital21c.

Figure 14.1. Top income tax rates, 1900-2013

The top marginal tax rate of the income tax (applying to the highest incomes) in the U.S. dropped from 70% in 1980 to 28% in 1988. Sources and series: see piketty.pse.ens.fr/capital21c.

Figure 14.2. Top inheritance tax rates, 1900-2013

The top marginal tax rate of the inheritance tax (applying to the highest inheritances) in the U.S. dropped from 70% in 1980 to 35% in 2013. Sources and series: see piketty.pse.ens.fr/capital21c.

Conclusions

- The history of income and wealth inequality is deeply political, social and cultural; it involves beliefs systems, national identities and sharp reversals
- In a way, both Marx and Kuznets were wrong: there are powerful forces pushing in the direction of rising or reducing inequality; which one dominates depends on the institutions and policies that different societies choose to adopt
- The ideal solution involves a broad combination of inclusive institutions, including progressive taxation of income, wealth and carbon; education, social & labor laws; financial transparency; economic & political democracy, incl. new forms of property, power structure and participatory governance
