COORG.

IMPERIAL SERIES—VOLUME XI.

THE REPORT AND TABLES

INTRODUCTION.

THE little province of Coorg, situated on the slopes and summits of the Western Ghats, is bounded on the north and east by the Hassan and Mysore districts of the Mysore State, and on the south and west by the Malabar and South Canara districts of Madras.

2. The area of the province, according to revenue survey, is nearly 1,600 square miles; its greatest length from north to south is 60 miles, and greatest breadth from east to west 40 miles. The old fort at Mercara stands about 3,800 feet above sea level, and this elevation is maintained for a considerable distance towards the north. Towards the east the country slopes down towards the Cauvery, the elevation of Fraserpet being some 1,100 feet lower than that of Mercara. A remarkable natural feature of South Coorg was once the bamboo jungle; a tract of land some 13 miles square being locally known as "the bamboo." This area is now for the most part under coffee.

3. Coorg is now divided for administrative purposes into five taluks, a previously existing sixth having been amalgamated with Nanjarápatna in the year 1895-96.

4. The history of Coorg is given in detail in the Imperial Gazetteer of the province, and does not need recapitulation. It is on the whole one of sturdy independence, and loyalty of the people to their own chiefs. What appears to have been homicidal madness in the reigning family—in the walls of the Mercara fort is still shown a little den, from which, it is said, prisoners were bolted like rabbits across in palace courtyard to test the Rájá's markmanship—led to the conclusion of its rule in 1834, when the Rájá Vira Rájendra Wodeyar was deposed, and the province, with the approval of the Coorgs, placed under the administration of the British Government. Its independence still persists in its recognition as self-contained administrative unit, under a Chief Commissioner, who is also British Resident in Mysore, and a Commissioner, resident in Mercara. For their loyalty during the Indian Mutiny, the Coorgs were rewarded by exemption from the Disarming Act.

5. In virtue of its existence as a separate province, the census of the little territory has always been taken separately. The first enumeration was that of 1871, which the Superintendent of 1881 considers to have been unsuccessful. This latter census was carried out by the then First Assistant Superintendent of Coorg, but those of succeeding *decennia* have been entrusted to the general supervision of the Provincial Superintendent of Census in Madras.

6. The method of taking the census of 1911 was exactly the same as that followed in the larger province; and no particular difficulties arose at any stage of the undertaking. I gladly avail myself of the opportunity to express my thanks to the Chief Commissioner, and to Messrs. Harris and Ellis, for their advice and assistance in a work to which I was able to devote but very little personal attention.

7. Here I should like to revive, with some modification, a suggestion put forward in the report of 1891 by Sir H. A. Stuart to the effect that the work of the Coorg census should in future be entrusted to a local official.

8. The actual taking of the census must necessarily be arranged by the Coorg officials. Tabulation of the information contained in the Census schedules can be most easily carried out in one of the West Coast offices of the Madras Superintendent; it would, I venture to think, be absurd to set up an extra abstraction office at Mercara, when the tables for such a small population can be prepared without trouble or delay in a large office specially entertained for census purposes. But when these tables are prepared and printed, the task of writing the report might very well be undertaken by one of the officers of the province. Statistical interest there is little or none in these small totals; intimate knowledge of the people and of prevailing economic conditions, which an outsider cannot possibly obtain in the course of a few days' hurried visit, would lend to such report an interest, wherein, I fear, my present effort is painfully lacking.

9. Local expenditure on the Census in Coorg amounted to Rs. 356. In this amount are included the cost of temporary district establishment, house-numbering charges, cost of printing circle lists, etc. Charges for abstraction and compilation, superintendence, etc., are included in the accounts for the Madras Presidency.

10. From a reader's point of view this report, necessarily brief in dealing with such a tiny population, might be written more conveniently in the form of one chapter divided into paragraphs, than broken up into a succession of very short chapters. But such arrangement would render difficult the convenient placing of the "subsidiary tables," which exhibit in handy form percentages obtained from actual figures, or else supply information not ascertainable in the course of a general enumeration.

CHAPTER I.—DISTRIBUTION OF THE POPULATION.

THE population of Coorg returned at the census of 1911 was 174,976, which represents a decrease of nearly 6,000 souls since the previous enumeration. Such decrease is probably artificial, and will be explained in a succeeding chapter.

2. Such as it is, this population represents a density of 111 persons per square mile, with a talukwar variation of from 128 per square mile (Nanjarápatna), to 67 per square mile (Pádinaknád). Towns are two in number, only Mercara and Vírarájendrapet, which indeed are little more than villages, having been considered as such in this occasion; villages so called number 493. It should, however, be noted that only in the four *hoblis* of North Coorg, (the Province is divided into four *hoblis* and fifteen *náds*; the *hoblis* resembling the Mysore country, while the *náds* represent the more hilly tracts), the residential village system prevails; the inhabitants of the province elsewhere living for the most part in detached farm-houses on their lands.

3. Occupied houses have increased by nearly 3,000 in a space of ten years; the average number of houses per square mile is greater by 2 than in 1901, and by 7 than in 1881; the average number of persons per house has decreased by 3 in 30 years, and by one since the census of 1901. If real, this movement lends itself to inference of increasing prosperity, and an increasing tendency towards sub-division; on the other hand, the explanation may perhaps be found in a more precise care to distinguish each dwelling place "having a separate entrance from the common way."

4. Subsidiary tables III and IV give the distribution of the population between towns and villages; and the number per mille of the total population, and of each main religion, who live in towns. The irreverent will, I fear, look on them as solemn superfluities: 765 Parsis per 1,000 live in towns, but, all told, the Parsis of the province number 3,411.

5. Mercara town, it may be noted, has added considerably to its population, while Vírarájendrapet has declined during the decade.

I.—Area under cultivation, etc., water-supply and crops (in acres).

Year.	Area available for cultivation.	Culturable waste other than fallow.	Current fallows.	Area cropped more than once.	Net area cropped.	Area irrigated by		Principal crops.

CHAPTER II.—MOVEMENT OF POPULATION.

THIS chapter is perhaps the only one of practical importance in dealing with the fortunes of Coorg. In it may be explained the curious fluctuations of population from decade to decade noticeable in table II, and also the apparent anomaly of increased house building to accommodate a decreasing population.

2. The explanation is really simple; it is largely a question of more or less coffee. Labourers on the coffee estates arrive about July, and return to their own affairs and crops about September. November sees a fresh influx, which does not ebb until the harvest is safely gathered in. The coffee crop of 1910-11 was comparatively light, and towards the end of February 1911, a large number of labourers had returned to their homes. The census was taken on the night of March 10th, 1911. The crop of 1911-12 was enormous, and the final paying off of labourers had not been completed everywhere, when I visited Mercara in the first week of April 1912. A census taken on March 10th of this present year would have given a widely different result.

3. These statements may be checked by a glance at a few figures. In 1901 those born in the province, and there enumerated, numbered 125,509; in 1911 the number had risen to 129,441. The decline in the total population is entirely due to a falling off of immigrants; those from Madras have declined from 29,348 to 28,581, (practically all from Malabar and South Canara); those from Mysore numbered in 1911 but 16,117, as against 24,712 of 1901.

4. It is clear that this factor of immigration renders practically valueless much of the information which the vital statistics of the province might otherwise afford. Immigration, as table XI in 1901 and 1911 shows, is preponderantly that of men, who may die, but who certainly cannot produce children. Thus in ten years (1900-1910) we find that Coorg shows an excess of 12,500 deaths over births; information as to birth and death rates for ten consecutive years will be found in subsidiary tables VI to VIII to Chapter V. The male death-rate exceeds the female in the ratio of 1,000: 819; but among the Kodagas, or Coorgs proper, men outnumber women but slightly, and the preponderance of male births over female is not in excess of, if equal to, the normal ratio of such happenings.

5. As in the case of Madras, the classification of 'causes of death' provides us with very little additional information. Of 56 thousand deaths registered in ten years, the all-embracing "fever" accounts for 46,000.

6. Inasmuch as Coorg depends for its prosperity on coffee, some information

Year.	Acreage under mature coffee.	Acreage unplanted or abandoned.
1901	58,333	30,977
1902	53,147	29,413
1903	51,445	35,330
1904	47,720	39,610
1905	47,657	40,095
1906	45,108	41,451
1907	45,414	40,180
1908	43,585	43,585
1909	42,773	42,452
1910	43,636	41,142

as to the extent of land under that crop may be of interest. There were in 1901, 58 thousand acres under "mature coffee," and 31,000 acres of coffee land unplanted or abandoned. The well-known setback which the industry experienced at the commencement of the last decade is illustrated by the figures quoted at the side. The improvement which has of late taken place is not apparent from these statistics, which show an actual

decrease of cultivated acreage except in the last year. Of this I understand the explanation to be that attention is now concentrated on land really suitable for the crop, and on improvement in methods of cultivation, rather than on the attempt to secure a large acreage.

7. When the price of coffee fell, the casual cultivations of the small native owner lost alike value and interest, and Indian attention devoted itself to the cultivation of rice wherever possible. Under this crop acreage rose from 79,930 acres in 1901 to 82,502 acres in 1910. With a normal rainfall of considerably over 100

inches per annum, paddy, as might be expected, is mainly rainfed; but the small acreage under tanks and channels, such as they are, was trebled in this period. But this apparent increase, I am informed, may be accounted for by more correct calculation of areas, rather than by extended cultivation.

8. Cardamoms, grown chiefly, I was told by a Coorg, by West Coast immigrants on leased *males*, appear to have accounted for 1,900 acres in 1910, as against 1,100 ten years earlier.

9. Pepper is a valuable "side-line" for the coffee planter, the cost of production being extremely low. Vanilla has been taken up in a small way by a few garden proprietors.

10. *Communications*.—There are no rail roads or waterways in Coorg. Four trunk roads run through the province: (1) Mysore to Tellicherry or Cannanore, (2) Mysore to Mangalore, (3) Manjурabad to Mercara, (4) Gonikoppal to the Wynaad *via* Ponnampet. Since the assumption of control by the British Government internal communications have been greatly improved, the policy of the old-time rulers having been to render their country as difficult of access as possible.

11. The Coorg does not appear to be much addicted to emigration. In the Madras Presidency 741 persons born in Coorg were enumerated, mostly in the districts of Malabar and South Canara; 3,071 were found in Mysore State; and three in Ceylon. The fact of a person being born in Coorg, it may be remarked, does not necessarily imply that he is a Coorg (or Kodaga) by race.

CHAPTER III.--BIRTH-PLACE.

Coorg statistics supply no material for a chapter on this subject. With the exception of an insignificant minority, those enumerated in the province were born in Coorg, in Mysore State, or else in the adjoining Madras districts of Malabar and South Canara. The European population, comparatively large in proportion to the total population, is accounted for by the planting community. It has declined somewhat since 1901, but it is obviously impossible to state definitely whether this decline is real or due to temporary causes, such as the revisiting of the "old country." At the same time it may be remarked that, in point of European immigrants, 1901 too showed a falling off as compared with 1891.

CHAPTER IV.—RELIGION.

If table VI and subsidiary table I to this chapter are to be accepted without question, the ten years that have elapsed since the census of 1901 have witnessed some curious theological changes. *Hinduism* is still the faith of the majority, but has suffered severely from the inroads of *Animism*, whose followers show the incredible increase of 482 *per cent*.

2. The decrease of *Hindus* and increase of *Animists* are alike easily explicable. If, when asked his religion, a person enumerated declared himself to be a *Hindu*, such assertion was accepted without question. If, on the other hand, at his own wish, or by the whim of the enumerator, the name of his caste or tribe was entered in column 4 of the census schedule, the abstraction office without further ado wrote such person down as "*Animist*."

3. In Chapter IV of the Madras Census Report an attempt has been made to give in simple language some idea of the main ideas underlying the several philosophical systems to which Western usage has given the name of the *Hindu* religion, and to estimate the influence on, or connection with, the religious life of the general population of such abstract speculations. It is unnecessary to tread this ground again; all the more so as the returns do not raise the question in the case of the most interesting section of the population, the Kodagas, all of whom have been returned as *Hindus*.

4. At the same time, one may be pardoned for doubting the accuracy of the term *Hinduism* as a description of the religion professed by these people. True, a Kodaga described his religion to me as *Saivism*; and a certain trace of Bráhmical influences may be observed in the existence of a small sub-class of Amma Kodagas (not distinguished in 1901), who wear the sacred thread, abstain from meat and from intoxicating liquors, and possess and exercise, whether actually or potentially, certain priestly attributes and functions. But the main objects of the Kodaga's adoration are the river Cauvery—possibly certain *Hindu* or Bráhmical ideas have been introduced into the manner of worship—deified heroic ancestors and miscellaneous private gods. This latter circumstance, I was told, explains the aversion of the Coorg to migration even within the province; his god does not approve of a change to new surroundings.

5. Of the 19,227 *Animists* in the province, Yeravas and Kurubas account for 19,128. Yeravas, who have in total numbers increased by 752 during the decade, were returned *en bloc* as *Hindus* in 1901; Kurubas, with a total increase of but 204, have completely changed their religious proportion, returning 5,207 *Animists* and 2,166 *Hindus*, as against 4,794 *Hindus* and 2,375 *Animists* at the previous enumeration. The change is purely arbitrary; but the description of the culture, manners and customs of the Yeravas given in the Imperial Gazetteer of Coorg shows that they have little, if anything, in common with the social or religious ideas usually evoked in one's mind by the use of the term *Hindu*.

6. When we come to *Musalman*s and *Christians*, we tread on somewhat firmer ground. After a steady increase between 1881 and 1901 the followers of these religious systems now show a falling off in numbers.

7. The actual decrease in the number of *Musalman*s is 511; this decrease is almost entirely on the female side. Máppillas, who number more than half the total Muhammadan population, show an increase in men with a slight falling off in women. The suggestion may be that these enterprising traders are invading the country in increasing numbers, while among the people of the country, amidst whom despite, or perhaps because of, Tipu's attempts to "honour Coorg with Islam," the religion never seems to have taken firm root, Muhammadanism is dying out.

8. The Christianity of the country is due indirectly to the ravages of Haidar and Tipu. The former, having defeated the Rájá of Coorg, sent into the province a small garrison in which were found some Catholics; and for their spiritual care the Jesuit missionary at Seringapatam was wont to send yearly a visiting priest. When Tipu captured Bednur and besieged Mangalore in 1783, he deported to Seringapatam a large number of Konkani Christians, who had given assistance to the British. Escaping from Seringapatam about 1792 these people were welcomed by the ruler of Coorg, who assigned to them land at Virarájéndrapet, assisted them to build a chapel, and obtained for their guidance a priest from Goa. The mission still exists under the charge of the Roman Catholic Bishop of Mysore, and to the present incumbent of Virarájéndrapet, Father J. J. Cochet, I am indebted for an interesting history of the transference of spiritual jurisdiction from Goa. This history is, however, of ecclesiastical rather than general interest, and considerations of space preclude quotation.

9. Of an Indian *Christian* population of 3,208 persons, the Roman Catholic Church claims 2,830 or 882 per 1,000; its only serious competitor being the Basel Mission, whose converts number 108 per 1,000 of the Indian Christian community. While the total Christian population has declined by 130, Indian Christianity just holds its ground, its adherents having increased by 48 during the decade.

10. The absolute numbers of *Jains* and *Parsis* are too small to render comment necessary.

I.—General distribution of the population by religion.

CHAPTER V.—AGE.

THERE is nothing of peculiar interest in statistics of age in relation to Coorg. Underlying the figures are the same causes of inaccuracy as noted in the case of Madras Presidency; the disturbing influence exerted by the presence of a large number of immigrant coolies in the prime of life, can be noted in subsidiary table I, which shows that the predominant section of the people is always that of men aged 25-30.

2. Subsidiary tables VI, VII and VIII show the vital statistics of the province. The reasons which render them for census purposes unreliable have been given in Chapter II.

3. Subsidiary tables IV and V, taken for what they are worth, are not encouraging. The proportion of children to persons aged 15-40, and to married women at this age, has fallen, while the proportion of married women aged 15-40 to the general female population has risen during the last decade.

4. The decrease in the population has taken place at the age period 0-40, while the proportion of the aged (60 and over) has risen considerably.

Number per 1,000 of population at reproductive period of life.

Year.	Men.	Women.
1911	475	401
1901	473	392
1891	477	407
1881	489	432

5. Assuming, as was done in the case of Madras, that the period of reproductivity for a man is 20-45, and for a woman 15-35, the figures noted in the margin show the position of the population in this respect at the last four enumerations.

6. As a guide to the future the number of those now aged 0-10 is of some use.

Number per 1,000 of population aged 0-10.

Year.	Male.	Female.
1911	198	251
1901	208	262
1891	226	284
1881	195	253

Twenty years hence such children, or so many of them as survive, will be the potential fathers and mothers of the rising generation in Coorg. The great rise from 1881 to 1891 is noteworthy, and it has been followed by a steady

decline, until the position has again reached the level of 1881.

I.—Age distribution of 10,000 of each sex in the Province.

Note.—Sexwar details are not procurable.

CHAPTER VI.—SEX.

THERE are but 799 women for every 1,000 men in Coorg. Immigration is again the explanation. Some classes obviously immigrant, such as Nāyars and Tiyans, have scarcely any women among them. But a steady fall in the proportion of women does not tally with the information given to me by a planter, who told me that the cooly, having got over his first shyness of a strange country, inclines now to bring his womankind along with him.

2. It would have been interesting, had it been possible, to take a census in the heavy crop year 1912, which followed the light year 1911. When crop is light, the planter must needs economize in his labour; and thus, so far as possible, engage men, who are more efficient than women. With a heavy crop, (and good prices), economy is not of such paramount importance; and, with demand for labour out-running the supply, the proportion of women workers must needs increase.

3. At the same time, a preponderance of men among the Kodagas, Yeravas, and Indian Christians, who may in general be assumed as natives of the province, suggests that Coorg in the matter of sex proportion ultimately agrees with Mysore rather than with Madras, although figures quoted in the preceding chapter show a general outnumbering of boys by girls at the age 0-10.

4. Inasmuch as post-puberty marriage is the rule amongst Kodagas, it is interesting to note that a defect of women here occurs for the first time at the critical age 12-15, followed by an upward movement from 15-20.

5. The extremely low proportion of women to men among Muhammadans is probably due to the fact that the Muhammadan trader or pedlar who visits the hills is even more apt than the cooly to leave his women at home.

CHAPTER VII.—CIVIL CONDITION.

At the time that the census was taken the civil condition of the Coorg population was as noted in the margin; the figures are taken from subsidiary table I to this chapter. A further reference thereto shows the alterations that have occurred in this position throughout a period of thirty years.

Civil condition of 1,000 persons.

Sex.	Males.	Females.
Unmarried	554	440
Married	400	387
Widowed	46	173

2. There were at this enumeration but 773 wives for 1,000 husbands. Tipu

Wives per 1,000 husbands.

	TOTAL	...	773
Hindus	784
Muhammadians	589
Christians	747
Animists...	984

Sultan, it is true, once denounced the Coorgs as guilty of polyandry, but these figures do not really prove that that truculent potentate was justified in his suspicions. Here too we must needs discount the influence of immigration.

Among Animists, the indigenous jungle tribes of the province, the proportion of wives to husbands is practically equal; the greatest deficiency is noticed among the Muhammadans, who, as already noted, are probably to a great extent but traders and pedlars not permanently resident in Coorg. Among the Kodagas themselves we see that wives exceed husbands; the explanation in all probability being that some widows or divorced women have returned themselves as married.

3. It is of interest to note that table XIV shows a few cases of infant marriage and widowhood among the Kodagas. This, a Kodaga gentleman assured me, is undoubtedly wrong; it has since occurred to me that such cases are to be explained by a tendency among settlers from the plains, who bring with them the social customs of their place of origin, to describe themselves as Kodagas; in the natural belief that, in Coorg at any rate, the social standing of the Kodaga is higher than that of the immigrant.

4. Marriage at a reasonable age is the unvarying rule among the Kodagas. Of the marriage ceremony an interesting account is given in the Imperial Gazetteer of Coorg; the chief peculiarity appears to consist in the fact that ceremonies are performed simultaneously in the houses of bride and bridegroom. Divorce on account of a woman's unfaithfulness is recognized; widow marriage apparently is not prohibited. Subsidiary table IV, compared with a similar table for 1901, shows that the proportion of widows, especially at the earlier ages, has decreased considerably.

5. The figures of Imperial tables VII and XIV, and those given in the subsidiary tables to this chapter, deal with actual totals so small that detailed analysis is not required to render them intelligible. These sections of the Coorg population which do not belong especially to the province are so small that it is impossible to take them as representative of their communities; to hang an essay concerning Māppilla marriage on the fact that there are some 7,000 Māppillas in Coorg would be obviously absurd. And as to peculiar marriage customs among the Coorgs proper, (I use the term to include Kodagas, Yeravas, Heggades, Ayiris, etc., etc.), I have no fresh or original information or knowledge.

CHAPTER VIII.—EDUCATION.

As in the Madras Presidency, ability to write a letter and to read the reply thereto, was in the Coorg census adopted as the criterion of education, or, at least, of literacy. Judged by this standard 17,443 persons, (15,277 men and 2,166 women), out of a total population of 174,976 were found to be educated. Compared with 1901, these figures show a total increase of 3,376, (2,469 men and 907 women), and subsidiary table III shows a very satisfactory proportional progress. Furthermore while the constant fluctuations, already explained, in the total population of the province are apt to render misleading proportions of which such total population forms one term, it may be noted that the floating population is almost entirely illiterate.

2. In comparison with the Madras Presidency Coorg makes a good educational showing; the proportion of literates to the total population, and among the followers of the Hindu, Musalman, and Christian religions, considerably exceeding that of the larger territory. Contrast of territories so completely disproportionate in extent and population is however hardly fair; if a comparison be drawn between Coorg and the Nilgiri hills, where general conditions are somewhat similar, it will be seen that the advantage is with the latter. At the same time, in the case of the latter district the effect on educational statistics of the large European populations of Coonoor, Wellington, and Ootacamund, must needs be discounted.

3. In regard to the literacy of particular castes, the figures given in the margin show a considerable progress among Kodagas. The comparison is vitiated to some extent by separation at this enumeration from Kodagas proper of Amma Kodagas, and of Jama Kodagas, whose low percentage of literacy must have depreciated that of the other sections with which formerly they were clubbed.

Caste.	<i>Literates per mille.</i>			
	Males.		Females.	
	1911.	1901.	1911.	1901.
Kodaga	374		78	
Jama Kodaga	25	284	1	37
Amma Kodaga	336		49	

4. Indian Christians have 313 male and 138 female literates per thousand of each sex. As Indian Christians were not in this respect differentiated from other Christian communities in 1901, it is impossible to judge whether they have advanced or receded in the matter of literacy. Their proportional figures, however, compare not unfavourably with those of the total Christian population; the falling off in English literacy noticeable in the Christian community is apparently due to a decrease in the actual numbers of Europeans and Anglo-Indians.

5. Education so far does not seem to have made much appeal to the Yeravas, who can boast but four literates in a total population of over 15,000. They can at least claim that their women are as well educated as their men, the total number of four being made up of two representatives from each sex.

6. Comparison of the number of literates at different age periods shows that among the male sex increase has been greatest at the age 20 and over, (40 per thousand), among women at the period 15-20—a fact which speaks well for educational progress amid female children in the decade.

7. From a manuscript volume of "Standing Information" compiled by Mr. L. T. Harris, I.C.S., Commissioner of Coorg, I gather that between 1901 and 1910 public schools increased in number from 77 to 91; and the pupils attending them from 4,325 to 5,910. Girls' schools increased from 4 to 7, with an increase from 179 to 606 in the number of pupils; the number of girls attending boys' schools rose from 736 to 1,205; the number of Coorg pupils from 2,769 to 3,859.

CHAPTER IX.—LANGUAGE.

TABLE X shows the languages current in the province, and the number of persons returned as speaking each language.

2. Some changes in proportion since 1901 may be noted. *Canarese*, though it still claims most adherents, is spoken now by but 386 per 1,000 of the population, as against 424 per 1,000 ten years earlier; *Kodagu* speakers have increased from 217 to 245 per 1,000 of the population. *Kodagu* speakers outnumber *Kodagas* by 3,500; the language, which, I understand, is somewhat akin to *Canarese*, is used by other castes, such as the *Āyiris*, of the province.

3. The decided decrease in *Canarese* speakers, and similar though slight fallings off in those returning *Malayālam*, *Tamil*, and *Telugu*, as their respective vernaculars, may be attributed to the early return of coolies to their homes—a fact which will also explain the proportional increase in representation of *Kodagu*. The actual increase in the number of *Kodagu* speakers, it may be observed, is but little greater than that in the number of the *Kodaga* caste or race.

4. *Yerava* is returned as the mother-tongue of 14,916 persons; figures which show that the marked increase between 1891 and 1901, (from 2,587 to 13,175), was the result of more correct enumeration in the latter year. Inasmuch as the number of *Yeravas* (Table XIII) is 15,338, it follows that some of the caste must use the more general speech of their neighbours: the phenomenon is however not so strongly marked in 1901, when *Yeravas* exceeded *Yerava* speakers by 1,411.

5. *Hindōstāni* speakers have decreased by 1,100 and odd: they tally in point of numbers almost exactly with the Musalman community exclusive of *Labbais* and *Māpillas*.

6. There are but 18 Portuguese in table XIII; accordingly if a return of 67 Portuguese speakers be correct the number must include some few Goanese, or West Coast Anglo-Indians. English is returned by 345 persons—a number which exceeds by 34 the combined totals of “Europeans,” “British,” “Anglo-Indians,” “Irish,” “English,” and “Scotch.”

CHAPTER X.—INFIRMITIES.

On this subject there is little to be said. The number of the affected has fallen from 240 to 92 in ten years, and each class of infirmity shows a decrease. If we can accept the returns as correct—a very doubtful question—this state of things is highly satisfactory.

CHAPTER XI.—CASTE, TRIBE, RACE OR NATIONALITY.

FOR the treatment of this section, the suggestion made in paragraph 7 of the introductory chapter would, I imagine, be of special import.

2. Table XIII shows the caste, tribe, race or nationality of every person enumerated in Coorg. A large number of such persons represent immigrants belonging to sections of the South Indian population in no way peculiarly representative of, or connected with, the province; and there is accordingly no justification for entering on a disquisition here as to their social or racial peculiarities. The castes peculiar to Coorg have been treated by Messrs. Holland and Richtor; in the report of 1901, Mr. Francis set forth some fresh information concerning the *Ayiris* and *Yeravas*. Devoid of personal acquaintance with the subject I can put forward nothing of that interest, which an official long resident in the Province, and conversant with the ways of its people, could doubtless supply.

3. To one small matter of detail, I may again draw attention. This is the division of the *Kodagas* of 1901 into *Kodagas*, *Amma Kodagas*, and *Jama Kodagas*. The distinction between *Kodaga* and *Amma Kodaga* has been noted in Chapter IV; as to the origin of the latter it is related that in the olden days, when strife ran high between *nād* and *nād*, or village and village, it was found necessary to exempt from the liabilities of war certain families, who should watch over the local gods and temples.

The *Jama Kodagas* are old-time immigrants from Mysore, who gained the favour of the Rāja, and received grants of land on condition of service. They are found only in Gadinād and Yedavanād of the Nanjarājapatna taluk; although they have adopted the Coorg dress, and, to some extent, the habits of the *Kodagas*, they remain distinct from the *Kodagas* proper.

Their fidelity to, and favour with, the Coorg Rājas are attested by the story that Virarāja, in exile in Benares, wrote asking that some *Jama Kodagas* of Gadinād might be sent to him, to be his companions and attendants.

4. In respect to increase or decrease in particular castes, sex proportion, etc., allusion has been made elsewhere in this report, where the question arose with greater appropriateness.

CHAPTER XII.—OCCUPATION.

THE information to be garnered from the various tables dealing with the subject of occupation presents no very unexpected features.

2. The principal industry of Coorg is the planting of coffee by Europeans. There does not seem to be any *a priori* reason why one race should grow a plant better than another; still, I was informed by an expert, who occupied a position of complete disinterestedness, that Indian coffee cultivation is as a rule bad; the grower gives his garden too little manure, too much shade, and fails to keep abreast of modern improvements in agriculture. To every rule there are exceptions; and it is only fair to add that a few Indian-owned estates in the neighbourhood of Somvārpēt, Mercara, and Sāntikoppa, take rank with the very best.

3. This view is confirmed by the figures of table XV-E, which show that, of 94 considerable estates enumerated, 83 are owned either by European companies, or by individual European and Anglo-Indian proprietors.

4. The number of persons shown as employed thereon, (10,812), is considerably less than that appearing in table XV-A against the item "tea, coffee, indigo, and cinchona plantations." The difference is probably represented by the small proprietors and their employēs; about almost every Coorg farm-house may be noticed some cultivation of coffee, small and careless though it may be.

5. When coffee slumped—apparently the number dependent on "planting" has fallen by nearly 7,500 in ten years—the Coorg must needs have turned his attention to other forms of agricultural employment. Figures quoted in Chapter II with respect to rice cultivation confirm this presumption, which, at the same time, receive but qualified support from the census figures: the number dependent on ordinary cultivation having increased by but 2,600 during the decade. The increase, moreover, is entirely among "dependents," actual workers of both sexes having fallen by about 2,400. Non-cultivating landowners have increased threefold, while cultivating landowners have decreased by over 4,000. The decrease, it may be remarked, is almost entirely on the female side—a fact which revives the eternal census question as to the relative accuracy of the returns at one enumeration or the other. Agricultural labourers have increased by but 787—a decrease of 810 among actual women workers setting off an increase of 1,597 among the men.

6. Although the matter is not strictly germane to the census, it is interesting to observe that many competent authorities have expressed doubt as to whether the old boom in coffee, and the subsequent slump, were unmixed boon and bane to the inhabitants of the province. The Chief Commissioner writing in 1899 remarks: "The country has been pauperized by the introduction of such a ready means of becoming rich as presented itself some years ago in the cultivation of coffee; with the higher style of living which unfortunately resulted, and especially the facility for extensive borrowing which it afforded." And another authority observes that, during their period of prosperity, intemperance gained a fearful hold on the people. This latter vice, it is agreed, is now on the wane; while in regard to the general effect of adverse fortune, the Chief Commissioner already quoted states: "There are signs that the Coorg character is slowly undergoing change in recognition of the necessity for thrifty living, and the abandonment of the foolish pride which has operated to prevent the people taking service, while it tolerated dissipation and laziness." These latter words, written some ten years ago, later observers consider to have been fully justified by subsequent events.

7. Returning to the consideration of table XV we find that "planting," and ordinary agriculture, support 143 thousand persons out of a total population of 175 thousand, and 96 thousand out of 116 thousand actual workers of both sexes. The occupational distribution of the remainder is fairly well in conformity with what the conditions of the province suggest.

8. The industrial section of the population is mostly concerned with wood work in its various forms. For such labour there is a natural demand in a planting district. The textile industry is practically unrepresented; it is probably cheaper to buy ready-made cloth than to import cotton, etc., for weaving. There are 196 male workers in iron; drawn probably from the 500 male members of the artisan caste, the Āyiris, who are described in detail in the census report of 1901. The characteristic metla work of Coorg is the heavy Coorg knife, carried at the back in simple but ingenious metal clasp. Two fine specimens of this knife, marked with the initials of Virarāja and Lingarāja, I saw in Mercara; but in these piping times of peace the demand for the article must needs be on the wane; its only present use is in friendly contests of skill, or on festive occasions, as when a bridegroom is required to cut through the trunk of a plantain tree at one stroke.

9. Food industries are chiefly represented by toddy drawers; 590 men in group 79 (building) represent chiefly, I imagine, thatchers and lattice workers.

10. Transport by road (order 21), as one would expect in a district 70 or 80 miles distant from a railway, is strongly represented: but what two labourers actually employed on railway construction can have been doing in Coorg, I fail to understand. Did their prophetic vision foresee a Tellicherry-Mercara railway?

11. The community must eat; therefore a certain representation of traders in foodstuffs is natural. Of such, traders in grains and condiment dealers form the majority. Butchers, who really represent trade rather than industry, are but 95 (group 59); a number somewhat small when we remember that Coorgs are flesh eaters. But inasmuch as the village system does not prevail, the hope of a large *clientèle* can hardly induce a man to adopt this profession.

12. There are of course some representatives of the liberal arts; but 75 male medical practitioners must include several persons, whose qualifications to practise the healing art are, to say the least of it, doubtful.

13. Table XVI shows the occupations of selected castes. It is uninteresting, and merely shows that Kodagas are for the most part cultivators; Mappillas, traders, with a considerable admixture of labourers of various sorts. Two hundred and seventy-three Kodagas are employed in the departments of "Public Force" and "Public administration". Of these three are gazetted officers.

THE IMPERIAL TABLES.
